

Service Name

Business SIP Trunks

Description

SIP trunks enable enterprises to utilise a single Internet connection for making and receiving multiple concurrent telephone calls. VoIP trunking provides your organisation with added flexibility, improves business continuity and offers substantial cost savings over traditional telephony services. By utilising VoIP trunks within a converged voice and data network, you can dynamically allocate bandwidth to other needs such as email and web traffic as and when you need it.

Features & Benefits

With savings of over 60% on existing line rental charges and with advanced features such as Dynamic Line Allocation, Flip Connect is ideal in a mixture of business environments. Whether you are looking for line replacement, additional capacity or a disaster recovery implementation then Flip Connect is ideal for you.

SIP Trunks

Flip Connect SIP trunking is available in a number of package variations for both UK and international destinations. UK SIP trunk packages start with 5 channels, which enable you to make and receive up to 5 concurrent calls from and to UK numbers. For further package options please see the table below.

Our International SIP trunk packages enable your business to receive concurrent calls to your international incoming number, as well as making concurrent calls to international destinations.

International SIP trunking packages start with 5 channels, enabling up to 5 concurrent calls. To benefit further from our SIP trunking packages, each channel can be assigned to individual destinations

Testimonial

“ The SIP Trunks that Flip provided were brilliant; the call quality was superb and the savings huge. Thank you.

Adrian . Managing Director . TIGNES.co.uk
